EXPLORING THE GROWTH AND OPPORTUNITIES WITHIN HING (ASAFOETIDA) INDUSTRY

Exploring the Growth and Opportunities Within Hing (Asafoetida) Manufacturing Industry

Hing (Asafoetida), also known as devil's dung due to the foul smell emitted from the root of *Ferula asafoetida*, is an important spice used in Indian cuisines. The spice is obtained by roasting and grinding the dried root of *Asafoetida*. In India, it is used as a medicine for a variety of ailments ranging from digestive problems to intestinal infections and nasal congestion and bronchitis.

That said, the Hing manufacturing sector has shown growth potential over the years owing to the increased demand for Hing sourcing from its growing popularity among consumers. To be precise, the global Hing market is expected to consistently soar through the ranks with a CAGR of 5.82% in the next three years.

In the same vein, this article aims to explore the growth and opportunities within Hing (Asafoetida) Manufacturing Industry. It not only seeks to highlight the market trends of the Hing industry but also situates it in terms of its economic influences and presents possible investment opportunities.

The Hing (Asafoetida) Manufacturing Industry

Due to its unpleasant odour, Hing's cultivation has always been a challenge. In fact, it requires a large amount of manpower to plant and harvest it. The roots are cleaned, dried and then sent to the crushing mill for extraction of the spice. The extracted spice is sieved for further processing. It is then packed in airtight containers and sent to the market.

Besides this, Hing's industrial growth can be attributed to:

1. Increasing Population
2. Increasing Demand from the Hospitality Industry
3. Rising Popularity of Hing (Asafoetida)

Market Overview Cum Detailed Techno Economic Feasibility Reports

- To get Loan/Finance from Banks/Financial Institutes.
- To set up your own Industry/Unit
- To have Detailed & Exhaustive Data on any Project.

* EIRI Project Reports are prepared by highly qualified & experienced consultants & Market Research and Analysis supported by a panel of Experts and Computerised.
* Data provided are reliable and upto date collected from manufacturers/suppliers, plant already commissioned in India.

A complete List of Industrial Project Reports are given on www.eiriindia.org

EACH DETAILED PROJECT REPORT CONTAINS:

- **INTRODUCTION** : Project Mix, Uses & Applications, Quality Control Measure & Their Introduction for Attaining Required Properties Economy & Productivity Competence.
- **MARKET OVERVIEW** : Market Position, Installed Capacity Production, Anticipated Demand, Present Manufacturers, Statistics of Imports & Exports, Estimated Demand, Demand & Supply Gap (If available), LI/IL Issued Recently
- **PROCESS OF MANUFACTURE** : Inventory Controls & Tests, Comparative Study of Process for Manufacturing the Product, Formulations, Process Flow Sheet Diagram, Process Detail in Stages from Raw Materials to Finished Products
- **RAW MATERIALS** : Raw Material Specifications, Market Codes & Raw Material Prices, Sources of Procurement of Raw Materials [Imported/Indigenous]
- **PLANT & MACHINERY** : Range of Machineries Required, Detailed Specifications of Machines & Equipments, Prices of Machineries, Suppliers of Plant and Machineries.
- **LAND & BUILDING** : Total Land Area Requirement with Rates, Covered Area Break-up with Estimated Costs of Construction
- **PROJECT ECONOMICS** : Land & buildings, Plant, Machinery & Other Fixed Assets, Total Capital Investment, Working Capital Assessment, Raw Material & Consumable Stores, Staff Salaries & Wages, Utilities & Overheads, Total Cost of Project, Sources of Finance/Refinance, Break Even Point Determination.

For assessing Market Potential, Corporate Diversifications, Planning, Investment Decision Making and to start your own setup, Entrepreneurs and Industrialists are most welcome to contact EIRI.

EIRI Technocrats and Engineers have just prepared "MARKET OVERVIEW CUM DETAILED TECHNO ECONOMIC FEASIBILITY REPORTS" on following lucrative products which are most viable and profitable and having bright future scope

Formaldehyde, Urea Formaldehyde, Melamine Formaldehyde Powder, Phenol Formaldehyde Resin, Sodium Formaldehyde, Naphthalene Formaldehyde, Dye Fixing Agent, Formaldehyde Methanol Sort By:

Sodium hydrosulfite through formaldehyde route cap-20 tpd
Sodium lauryl sulphate and sodium lauryl ether sulphate
Sodium polyacrylate dispersant for use in water based paint with dispersant for pigment
Sodium sulphide
Urea formaldehyde and melamine formaldehyde moulding powder
Urea formaldehyde powder & melamine formaldehyde powder

Rubber and Rubber Products, Rubber Chemicals, Goods, Latex, Compounds and Industries, Natural Rubber, Extruded Rubber, Synthetic Rubber, Rubber for Automobile, Belt, Gloves, Tyre, Tire, Rubber Based Industries

Antifoaming/defoaming agent like antanol t-709
Automobile rubber parts
Benzalkonium chloride
Calcium aluminate
Ethylene propylene diene monomer (epdm) rubber profiles
Gloves/mitt/gage/gauntlet (knitted)
Industrial rubber sheet
Latex foam (rubber) products
Manganese oxide and manganese sulphate
Nitro cellulose (lacquer)
Precipitated calcium carbonate
Rubber & flat transmission

belt conveyor belt
Rubber & plastic sheets, mats & flaps
Rubber (and metal bonded) auto parts
Rubber adhesive
Rubber adhesive (all purpose)
neoprene & isoprene based rubber moulding & lining of rubber sheeting
Rubber adhesive for plywood
Rubber auto gasket
Rubber auto parts
Rubber balloon
Rubber balls
Rubber band
Rubber beading for automobiles

Aloevera Cultivation, Processings, Formulations And Manufacturing Technology (Hand Book)

₹ 2,100 \$ 175

Numerous aloe species around the world are used for conditions ranging from dermatitis to cancer. Aloe gel's greatest use is as a skin salve and vulnerary for minor burns, abrasions, canker sores and other epithelial injuries. There is growing experimental evidence for its use as an antiviral, an ulcer remedy and an adjuvant cancer treatment due to its immune modulating effects. Aloe latex is a potent laxative that can cause severe cramping and diarrhea; it should not be used during pregnancy, lactation or by children less than 12 years old. Allergic reactions to aloe have been reported.

Food processing sector India's investment destination

India has a major role in the future of global food business as it has a strong base in agriculture and provides a large and varied raw material base for Food Processing industry. It is a country of over 1.10 billion consumers and there is a largely untapped domestic market of 1000 million consumers in the food processing sector and two hundred million more consumers are expected to shift to processed food by 2010.

Technology of Lubrication & Lubricants, Crude Oil Processing, Catalysts in Petroleum Refining and Petrochemical Processes with Mineral Turpentine Oil

₹ 1,099 \$ 77

The Book covers the following chapters: Lubrication and Lubricants, Benzene, Ethylene, Monoethylene Glycol, Diethylene Glycol, Triethylene Glycol, Ethylene Oxide, Toluene, Xylene, Petroleum jelly, Bioethanol Production From Sugar Cane Molasses, Production of Bio-ethanol from Molasses by Schizosaccharomyces Species, Petroleum Crude Oils, Crude Oil Processing, Chemicals Based on Methane, Ethane and Higher Paraffins-Based Chemicals, Chemicals Based On Ethylene, Chemicals Based on Propylene,

Technology of oilseeds processing, oils & fats and refining (hand book)

₹ 1,250 \$ 98

Chemical Constituents of Fats
Fatty acids, Rules of Nomenclature, Numbering, Nomenclature Symbols, Saturated Acids, Acids with an even number of carbon atoms, Branched chain acids, Monoenic acids, Monoenic acids: ethylene bond at 9, Monoenic acids: ethylene, bond at n - 9, Position isomers of oleic acid, Monoenic acids: trans ethylene bond, Monoenic acids: terminal ethylene bond, Polyenic Acids Other Polyunsaturated Acids

Technology Of Perfumes, Flavours And Essential Oils

₹ 980 \$ 82

CREATING A PERFUME
Introduction, Working within a Framework, Price, Packaging Inspiration, The Practical Foundation, Inspiration, Response to Stimuli, Trial and error colours, Trial and error, Colours, Jeancard on composition, Limitations of Formulae, The Perfumer's knowledge of Chemistry, Creativity in the Art of Perfumery, Carles's Method, Merit of Carles's System, Tone, Volatility, Intensity, Volume, Atmosphere, Tenacity, Fixation, Systematic Recording of Data
FLOWER PERFUMES AND THEIR FORMULATIONS

MILK PROCESSING UNIT

The importance of milk in human diet especially for children and expectant and nursing matters is vital.

Unlike rich countries like the U.K. and the U.S. dairying in India is a subsidiary occupation of almost all the farmers. More than 60 per cent of the families involved in dairying belong to the small or marginal farmers or even agricultural labourers.

In the first half of the 1900 dairying in the country was largely unorganized, except for military farm which were established and largely stocked with the European breeds. In the plantation areas, pure breed exotic bulls were randomly crossbred with local cows. Apart from the "poskets" of improved animals thus created, dairying was largely left in the hands of traditional producers, middle man, product makers and vendors.

Some private dairies were more or less modern processing facilities were encouraged to make pasteurized butter mainly for the British Army. In the early 1940's one such firm also become the prime supplies to the country's first official urban milk supply scheme "The Bombay Milk Scheme". Under it chilled milk was transported in cans by rails to Bombay from Anand in Kheda District some 425 km from Bombay.

When India became independent in 1947, are of earliest projects of its type to be adopted was the creater Bombay Milk Scheme which consisted of a market milk plant in Bombay, supplied with milk by the Khairs District Cooperative Milk producers union.

The union which had its processing plant close to the town of Anand, ultimately came to be known as the Anand Milk Union Ltd abbreviated to Amul, meaning "beyond price" or "priceless". The world's largest during development programme the operation flood is distinguished by its involvement of small holders and landless rural milk producers.

BEER PLANT

The world of today is changing fast. India is no exception. Especially after the opening up of the economy, the pace of change that India and its people are experiencing in their socio-cultural milieu is mind-boggling. India, with its wide diversity, offers a fascinating scope to study the host of changes which developmental activities have brought about in its social and economic fabric¹. While it is possible to get any accurate measure of the subjective experiences that precede, accompany or follow such changes. However, the fact remains that the profile of the Indian market is vastly different from what it was five years ago. Although these changes are difficult to measure at the micro level, nevertheless, they have been of great significance to markets. Any market is keen to closely monitor the changes in terms of numbers and specially to keep regular track of the changing pattern of consumer's aspirations and competitive actions.

Fast Moving Consumer Goods usually refer to non-durable products. Examples include soft drinks, toiletries, grocery items, etc. A customer usually spends a minimum of effort to procure them. However, much of astute marketing activities have evolved from this class of products, where consumers show low involvement, put wider choice and allured by a host of inducements.

Beer is an alcoholic beverage with low alcoholic content (2 to 7 % by volume) produced by the saccharification of starch and fermentation of the resulting sugar. Starch and enzymes used for saccharification are derived from cereal grains most commonly barley, malted to develop essential enzymes and produce the desired flavor.

MODERN RICE MILL

Rice is a vital food material for more than half of the world's population, the importance of which as a food crop has been increasing with increase in population. Rice is regarded as a first cultivated crop of Asia. Preserved rice grains were found in China around 3000 B.C. Paddy grains found during excavation at Hastinapur (India) around 1000-750 B.C. considered as an oldest sample in the world.

Rice has been found in archaeological sites dating to 8000 bc, although the date of rice domestication is a matter of continuing debate. Two species of domesticated rice, *Oryza sativa* (Asian) and *Oryza glaberrima* (African) are grown globally. Numerous traits separate wild and domesticated rices including changes in: pericarp colour, dormancy, shattering, panicle architecture, tiller number, mating type and number and size of seeds.

Rice is the world's largest food crop, providing the caloric needs of millions of people daily. There are two distinct types of domesticated rice, *Oryza sativa*, or Asian rice and *Oryza glaberrima*, African rice, both of which have unique domestication histories. In order to examine the variation selected by humans over our long relationship with rice, we must first look at the ancestors of our modern cultivars. The genus *Oryza* contains 21 wild relatives of the domesticated rices. The genus is divided into four species complexes: the *O. sativa*, *O. officinalis*, *O. ridleyi* and *O. granulata* species complexes. All members of the *Oryza* genus have n = 12 chromosomes and while interspecific crossing is possible within each complex, it is difficult to recover fertile off-spring from crosses across complexes.

OLEORESIN USING SOLVENT EXTRACTION METHOD

Oleoresins are flavoured compounds obtained by the solvent extraction of the ground spices. They have aroma and possess attributes which contribute to the taste like pungency. All spices contain essential oils in various proportions which can be extracted by steam distillation. Oleoresins are preferred because of their microbiological advantages and uniformly in flavour and pungency, easy to store and transport. They have several applications like preparations of beverages, soup powders, curry powders, confectioneries, noodles, canned meats, sauces.

Compliance under PFA Act is mandatory. ISI has specified quality standards vide IS 5832 & 7826 of 1975. Oleoresins have large domestic as well as export markets. They are consumed by broad spectrum of manufacturer like beverages, soup powders, curry powders, confectioneries, noodles, canned meats, sauces, poultry products and so on. Most of the end use industries are growing steadily and bound to increase with increase preference of quality products. The use of spice is rapidly replaced with oleoresins and exports of these products instead of raw spices results in considerable value addition.

Types: Ajowan seed oleoresin, black pepper oleoresin, capsicum (chilli) oleoresin, cardamom oleoresin, cassia bark oleoresin, celery seed oleoresin, cinnamon bark oleoresin, clove bud oleoresin, coriander seed oleoresin, cumin seed oleoresin, curcumin powder, date extract, fennel seed oleoresin

SURGICAL & NBR GLOVES MANUFACTURING UNIT

Gloves are single-use items and should not be washed or reused. Polythene: Thin and have a tendency to tear. They are not an appropriate choice for healthcare settings. Vinyl: Have been shown to be less effective than latex gloves in providing an impermeable barrier against microorganisms.

Disposable medical gloves are available in nitrile, latex and vinyl materials. Any gloves worn by health professionals should be free of powder, sterile, textured and coated for extra protection. Nitrile tends to be the most favored glove material for those working in the healthcare industry.

A disposable glove is commonly made from natural or synthetic rubber that covers the whole hand and is used to protect the wearer against harmful environmental influences and/ or used by caregivers in health care to protect themselves and patients from infections. As the name implies, disposable gloves are designed for single use only and should be disposed immediately after use.

Hand Protection- one of PPE'S

Appropriate selection of gloves is essential to protecting hands. Chemically protective gloves are one of the most important tools to minimize dermal exposures to chemicals in research laboratories. Gloves should only be used under the specific conditions for which they are designed, as no glove is impervious to all chemicals.

MULTI COMMODITIES COLD STORAGE

India is the largest producer of fruits and vegetables in the world scenario but the availability of fruits and vegetables per capita is significantly low because of Post Harvest loses which account for about 25% to 30% of production. Further, the quality of sizeable quantity of produces also deteriorates the moment it reaches the consumer. This happens because of perishable nature of the products. If consumption is not getting stabilized, the farmers switch over to other crops instead of going for one crop in the subsequent year, and cycle continues. Our farmers continue to remain poor even though they take risk to cultivate high value fruits and vegetables year after year.

Cold Storage is a special kind of room, the temperature of, which is kept very low with the help of machines and precision instruments. India is having a unique geographical position and a wide range of soil thus producing variety of fruits and vegetables like apples, grapes, oranges, potatoes, chillies, ginger, etc. Marine products are also being produced in large quantities due to large coastal areas.

Introduction of Cold storage / Cold room facility will help them in removing the risk of distress sale and simultaneously will ensure better returns. The annual production of fruits and vegetables in the country accounts for 18 to 20% of our agriculture output. Varied agro climatic conditions and better availability of scientific package of practices, there is a vast scope for increasing the production. The lack of cold storage / cold room facilities is one of the main bottlenecks in tapping the potential.

The cold storages, which are available in the State, are mostly to store single commodity like potato, which results in poor capacity utilization. Introduction of cold storage/cold chain facilities in the State can prove to be a boon for the horticulture farmers.

COUNTRY LIQUOR BOTTLING PLANT

Country made liquor is a distilled alcoholic beverage made from locally available cheap raw material such as sugar-cane, rice, palm, coconut and cheap grains, with alcohol content between 11.4-45.7% V/V5. In developing country like India, it is more popular among poorer sections of population both in rural and urban part as it is cheaper than the foreign liquor or Indian made foreign liquor.

IMFL and country liquor goes through the same manufacturing process and is distilled from the same agricultural source (molasses). The differences are in strength (the percentage of alcohol) and flavours. Add whisky or brandy flavours, for instance, and it becomes IMFL. Take the flavour to a tangier side, it's desi daru.

Country liquor, according to the BIS standards, is rectified Grade I spirit or any neutral spirit which may be obtained from fermented molasses, grain or any other source of fermentable carbohydrates. Cut through the technical jargons, all it means is that alcohol made from molasses and grains and distilled to a fairly high degree so that you get rectified spirit, minus the impurities.

This also means that it's not country liquor that's masquerading as something else but it's IMFL that's being passed off as genuine whisky, alcohol, gin, and brandy etc.

The similarity largely has to do with the manufacturing process. "Both IMFL and country liquor use the same commercial reactive enzymes and multi-column distillation process. At a basic level, it's the same. That's the standard distillation equipment that gives rectified spirit.

EXTRACTION OF CURCUMIN AND TURMERIC OIL

Curcumin (diferuloyl methane), the natural yellow pigment in turmeric, is isolated from the rhizomes of the plant *Curcuma longa*. It constitutes about 3-4% of the composition of turmeric. In the south and southeast tropical Asian countries, turmeric has been used for centuries as a spice to give the specific flavor and yellow color to curry. Turmeric became a very important spice to mankind when it was observed that the addition of turmeric powder in food preparation preserved its freshness and nutritive value.

Turmeric, as an additive, improved the palatability. Aesthetic appeal and shelf life of perishable food items. The use of turmeric became more popular when it was found to act as a therapeutic agent for various illnesses. In the Ayurvedic system of medicine, turmeric is used as a tonic and as a blood purifier. Its role in the treatment of skin diseases and its ability to soften rough skin resulted in the prolific use of turmeric in topical creams and bath soaps in India. Turmeric is also used in home remedies in the treatment of cuts, wounds, bruises, and sprains. Its use as an anti-inflammatory and antimicrobial agent has been recognized for more than a century.

The importance of turmeric in medicine took a new twist when it was discovered that the dried rhizome of *Curcuma longa* is very rich in phenolics, whose structures have been identified as curcuminoids. Phenolics are known to possess antioxidant properties. Free radical mediated damage to biological systems is recognized as the initiating agent for many diseases, such as cardiovascular diseases, cancer, and arthritis.

Turmeric and its constituents show beneficial effects on these diseases and on other illnesses.

LITHIUM-ION AND LITHIUM POLYMER BATTERIES MANUFACTURING

Electrochemical storage systems will increasingly gain in importance in the future. This is true for the energy supply of computers and mobile phones that are becoming more and more sophisticated and smaller. It is also true for power tools and electric vehicles as well as, on a larger scale, for stationary storage of renewable energy.

Lithium-ion battery packs are complex systems of interrelated components and subsystems but can be relatively easily understood by most people because the pack is the thing that we can touch, hold, and feel. But understanding the lithium-ion chemistries and the physics and chemical reactions that occur inside those battery cells requires gaining an understanding of an even more complex set of systems and interrelationships that are really well understood only by those few chemists, researchers, and cell engineers who work with them on a daily basis. And there is even a lot that they do not understand about some of the reactions that take place inside the cell. However, even without having done advanced research in chemistry it is possible to achieve a good basic understanding of how these different chemistries work, what the more complex reaction mean, and what happens inside a lithium-ion cell when you use energy from it.

The word "battery" comes from the Old French word *batterie*, meaning "action of beating," relating to a group of cannons in battle. In the endeavor to find an energy storage device, scientists in the 1700s adopted the term "battery" to represent multiple electrochemical cells connected together.

The battery consists of two electrodes that are isolated by a separator and soaked in electrolyte to promote the movement of ions. New active materials are being tried, each offering unique attributes but none delivering an ultimate solution.

Improvements have been slow. Whereas Moore's Law* doubled the number of transistors in an integrated circuit every two years, capacity gain of lithium-ion (Li-ion) has been about 8 percent per year in the decades following its introduction in 1991.

A lithium-ion battery (sometimes Li-ion battery or LIB) is a member of a family of rechargeable battery types in which lithium ions move from the negative electrode to the positive

electrode during discharge and back when charging. Li-ion batteries use an intercalated lithium compound as one electrode material, compared to the metallic lithium used in a non-rechargeable lithium battery. The electrolyte, which allows for ionic movement, and the two electrodes are the constituent components of a lithium-ion battery cell.

Lithium-ion batteries are common in consumer electronics. They are one of the most popular types of rechargeable batteries for portable electronics, with a high energy density, small memory effect, and only a slow loss of charge when not in use. Beyond consumer electronics, LIBs are also growing in popularity for military, battery electric vehicle and aerospace applications. For example, lithium-ion batteries are becoming a common replacement for the lead acid batteries that have been used historically for golf carts and utility vehicles. Instead of heavy lead plates and acid electrolyte, the trend is to use lightweight lithium-ion battery packs that can provide the same voltage as lead-acid batteries, so no modification to the vehicle's drive system is required.

Chemistry, performance, cost and safety characteristics vary across LIB types. Handheld electronics mostly use LIBs based on lithium cobalt oxide (LiCoO₂), which offers high energy density, but presents safety risks, especially when damaged. Lithium iron phosphate (LiFePO₄), lithium manganese oxide (LMnO or LMO) and lithium nickel manganese cobalt oxide (LiNiMnCoO₂ or NMC) offer lower energy density, but longer lives and inherent safety. Such batteries are widely used for electric tools, medical equipment and other roles. NMC in particular is a leading contender for automotive applications. Lithium nickel cobalt aluminum oxide (LiNiCoAlO₂ or NCA) and lithium titanate (Li₄Ti₅O₁₂ or LTO) are specialty designs aimed at particular niche roles. The new lithium sulphur batteries promise the highest performance to weight ratio.

Numerous aloe species around the world are used for conditions ranging from dermatitis to cancer. Aloe gel's greatest use is as a skin salve and vulnerary for minor burns, abrasions, canker sores and other epithelial injuries. There is growing experimental evidence for its use as an antiviral, an ulcer remedy and an adjuvant cancer treatment due to its immune modulating effects. Aloe latex is a potent laxative that can cause severe cramping and diarrhea; it should not be used during pregnancy, lactation or by children less than 12 years old.
