ALUMINIUM FOIL CONTAINER

Aluminum is the most widely used non-ferrous metal and is extensively used in packaging materials. It is an excellent material for creating all types of containers. However, despite the fact that about seven billion aluminum foil containers are produced annually, most packaging engineers and packaging users know very little about the advantages that these containers bring to the packaging and food service industries

Specifically, aluminum provides an absolute barrier to protect foods, whether on the shelf, in the cooler or in the freezer. It can go from freezer to oven to broiler to microwave oven and result in quality food products whether at home or in central food processing operations. It is lightweight, so that it is easy and economical to transport. It is formable so that it is available in a wide variety of shapes and sizes. It can be printed, coated or embossed. And, it is recyclable which results in a 95% energy savings over that required to produce primary metal.

The growth of the aluminum foil container is due to its many advantages. The natural qualities of aluminum, its impermeability and barrier properties, provide real benefits for consumers. There simply is not a more versatile material.

Aluminum foil containers offer some of the most versatile packaging solutions available today, like aluminum foil cups/plates, aluminum foil dishes, aluminum foil food containers, aluminum foil trays, aluminum food packaging containers with lids, disposable aluminum foil pans, disposable food containers with lids, foil containers with lids for food, foil food containers with lids, foil takeaway containers, food foil packaging. They combine the features needed to process, conserve and deliver to the consumer perfectly preserved and quickly accessed food products.

ELECTRIC SCOOTER

An electric scooter is vehicle that is powered by electricity, and that it will require periodic plug-in charging in order to function. They usually come in a two wheel format, although three wheels models exist too. They have a step-through frame, where the rider can stand while driving the vehicle.

Some models might even offer a seat, but this is just an addition on the step-through platform or frame. This is the key difference between electric scooters and electric motorcycles, where the later do not have a step-through frame, and directly provide a seat integrated in their frames.

As previously said, the electric scooter requires electricity to function, which will be stored in some type of rechargeable battery that is attached to the frame. Some of the most common type of batteries for scooters are lithium ion batteries, and sealed lead acid batteries.

TYPES OF ELECTRIC SCOOTERS

There are several types of electric scooters in the market you can choose from. Before purchasing the best electric scooter, you should ask yourself to know the type. And then you should select the scooter accordingly. Ask yourself about the purpose of buying the best electric scooter. For your ease, we have here discussed different types of the electric scooter in details.

Electric Motorcycle:

This is a full-fledged vehicle powered by electricity. This is mainly used for professional racing purposes. It can attain good speed if required. These types of electric motorcycle are more or less expensive.

MANUFACTURING OF PLASTER BOARD LINERS

The Paper industry in India is expected to grow at a CAGR of 5.5% during the forecast period of 2021-2026. During the COVID-19 pandemic, the Indian e-commerce industry witnessed significant growth in the volume of online orders due to the restrictions imposed on the movement of people and the shutdown of physical stores. People across the country are increasingly buying online groceries, food items, and daily essentials while also purchasing merchandise online. Such trends are expected to boost the demand for sustainable packaging solutions, as the e-commerce and retail industry is one of the major adopters of paper and paperboard solutions in the country.

- This market is growing rapidly owing to the higher growth of food and beverages, cosmetics, and other industries in India. Moreover, different government initiatives to reduce plastic wastes are also influencing the growth of this market.

- As per the data of Associated Chambers of Commerce and Industry India, the market size of Organized food is expected to reach INR 780 million in 2020. Hence, raising awareness of consumers and the growth of the organized food sector in India is influencing the growth of the market.

- According to the Indian Paper Manufacturers Association (IPMA), the market size of the Indian Paper and paperboard market is 16.1 million tones in 2019. Moreover, the packaging consumption in India increased by 200% from the previous year, and it has risen from 4.3 kg per person per annum (pppa) to 8.6 kg pppa.

ASSEMBLY LINES FOR BOTH LFP PRISMATIC & NMC CYLINDRICAL CELLS

Battery Pack: Energy storage device, which is comprised one or more cells or modules electrically connected together inside a mechanical pack with electronics as required for safety and operation.

The battery pack may incorporate a protective housing and be provided with terminals or other interconnection arrangement. It may include protective devices and control and monitoring required for safe and proper operation. A typical example of a battery pack may be built by using 6s2p Lithium-ion module. It may provide detailed information (e.g., cell voltage, temperature, capacity) to a higher level battery system management device.

Battery management system or unit (BMS, BMU): Electronic system associated with a battery which monitors and/or manages its state, calculates secondary data, reports that data and/or controls its environment to influence the battery's performance and service life and has the functions to cut off in case of abnormal conditions (e.g., over charging, over current and overheating and charge balancing between cells or parallel cells blocks).

Depending on the application and its size, the function of the BMS/BMU can be assigned to the battery cell, module, string, pack or system and equipment using the battery.

COCOA PRODUCTS (COCOA BUTTER & COCOA POWDER)

Cocoa is the product of the fruit of the cocoa tree (lat. Theobroma cacao), which requires a hot, wet climate, a mean shade temperature of 27°C, and well-distributed rainfall. This is why it can only be grown in regions within 20° latitude of the Equator.

Although the cocoa tree is indigenous to Latin America, Africa today accounts for 70% of the world's cocoa bean production. Cocoa farming is mostly manual, requiring significant expertise and most cocoa in Africa is grown on small family farms of 2-5 hectares. Next to the Ivory Coast and Ghana, other major cocoa producing countries are Nigeria, Cameroon, Indonesia, Papua New Guinea, Malaysia, Ecuador, Brazil and Colombia.

The cocoa is a very unusual looking tree, with yellow, green and red coloured fleshy fruit pods, about 25 cm long, hanging directly from its trunk and branches. The cocoa beans are embedded within a sticky, white, sweet tasting pulp. At harvest, the cocoa bean has to have reached the proper level of ripeness as under-ripe or over-ripe pods will have a negative impact on the bean's cocoa flavour.

Raw cocoa beans are bitter and quite inedible. Two processes are required to turn the raw bean into the raw material for chocolate: fermentation and drying. Once the beans have been removed from the pods they are stacked, covered and left to ferment for 3-9 days.

APPLE CHIPS PROCESSING PLANT

India is known as the second largest fruits and vegetables producer in the world followed by China. India accounts for about 15 per cent of the world's vegetable production. In the production of many fruits and vegetables, India is either first or second. However, fruits and vegetables being perishable in nature, get wasted to the tune of 20-30 per cent in the whole supply chain due to poor post harvest management. On the other hand, only 2 per cent of fruits and vegetables are processed in to value added products and the rest is consumed as fresh. Therefore, processing of fruits and vegetables offers immense scope for wastage minimization and value addition; thus can generate significant income and employment in Indian agrarian economy.

Fruits and vegetables are seasonal as well as perishable in nature. Dehydration of seasonal fruits and vegetables are good bet for long term storage even upto 5 years or beyond if hermitically sealed and can be made available to the consumers during off season. There is immense scope of market for certain popular and high value dehydrated seasonal fruits and vegetables.

It is estimated that 70-80 percent of the Indian apple growers market their produce via organized marketing channels and approximately 85-90 percent of this fruit is consumed fresh - while the rest is exported, processed, or wasted.(source GAIN report of USDA) As per the latest estimates, by Central Institute of Post Harvest Engineering and Technology (CIPHET), Ludhiana. Hardly 2 per cent of perishable horticultural produce is processed to value added products.

ALLOY WHEEL RIM (12")

In the automotive industry, alloy wheels are wheels that are made from an alloy of aluminium or magnesium. Alloys are mixtures of metal and other elements. They generally provide greater strength over pure metals, which are usually much softer and more ductile. Alloys of aluminium or magnesium are typically lighter for the same strength, provide better heat conduction, and often produce improved cosmetic appearance over steel wheels.

Lighter wheels can improve handling by reducing unsprung mass, allowing suspension to follow the terrain more closely and thus improve grip, however not all alloy wheels are lighter than their steel equivalents. Reduction in overall vehicle mass can also help to reduce fuel consumption. Better heat conduction and a more open wheel design can help dissipate heat from the brakes, which improves braking performance in more demanding driving conditions and reduces the chance of diminished brake performance or even failure due to overheating. The alloy wheel rim weight varies based rim sizes. The weight of 12" Alloy rim is 5.5 Kg.

Unlike steel wheels which are made simply from steel, alloy wheels are made out of a mixture of metals such as aluminium or magnesium. Alloy wheels are cast, and it is this process that allows designers to create a variety of complex designs which offer more appeal than plain steel wheels.

At one time, only premium cars or sporty models came fitted as standard with alloy wheels and alloy wheels have long been considered a desirable feature. However, there are now more car manufacturers fitting alloy wheels as standard on the majority of their vehicles due to the vast benefits of alloy wheels.

CORRUGATED BOXES AND MONO CARTON MAKING PLANT

Paper makers in the country are becoming conscious of the needs of container industry and are working to improve the existing qualities. In India textile, tea, tobacco and coffee are probably the largest consumers of papers. Out of the total paper production about 35 per cent goes to the packaging industry. With the advancement of industry, the production of paper and paper board is bound to increase, and the major increase will be in the field of packaging papers and boards. Paper is intact replacing the older materials used for packaging. In addition, paper in packaging is economical; light easy to handle and superior. Corrugated boxes and solid fibre containers are extensively being used in place of wooden boxes.

The advantages of corrugated boxes to other packaging materials may be summed as under.

1. Light weight.
2. Low cost.
3. Easy setting up and letting.
4. Small storage space required.
5. Cushioning properties.
6. Easy handling.
7. Adaptability to interior packing.
8. Attractive printing.

SPICES INDUSTRY AND PRE MIX MASALA

Spices which are basically plant products, have a definite role to play in enhancing the taste flavour, relish or piquancy of any food; most of the spices are fragrant, aromatic and pungent. They comprise seeds, barks, rhizome, leaves, fruits and other parts of plants, which belong to variegated species and genera since time immemorial, India is renowned to be the home of spices. Most important spices like black pepper (king of spices), cardamom (queen of spices), ginger, chillies and turmeric, which are produced in India, have a great reputation, and these constitute the major group of spices. In the list of spices, clove, nutmeg, cinnamon and cassia are known as tree spices. However, spices like fennel, fenugreek, garlic, onion, coriander, cumin, vanilla, saffron; etc.

There are a number of spices used along with food, namely;

1. Common Salt, 2. Coriander, 3. Chill, 4. Haldi, 5. Ajwain & Maithee, 7. Onion and so on; These spices are not used at a time. For preparation of any dish may be Indian or European, may be vegetarian or non-vegetarian we use more than a dozen spices for its preparation. The combination of all the spices but together for the use of one particular dish as known as 'masala' of the spices, the bulk of the dry matter consists of carbohydrates, proteins, tannins, resins, volatile oil, fixed oil, for pigments, mineral elements, etc. These constituents differ greatly in their composition and content in different spices. They have varied physical and chemical properties. Due to this reason, the processing method of different spices, differ widely and require individual expertise in variety operations like curing, drying, cleaning, grading and packing.

Harvesting of each spice is done at a particular stage of maturity in a particular manner suitable for it avoiding any sort of damage before processing. It is transported to the processing centre as quickly as possible and stored properly before it is taken to up for processing.

USES AND APPLICATIONS

There are a large number of dishes used commonly and on special occasions; correspondingly, there may be a large variety of Masala (spices) also.

However, the purpose or use of spices (a MASALA) in dishes is twofold - and being the appetizer and the other being taste

and flavour of any food. A dish of spices adds individuality to standardized foods, traditional or modern.

In the indigenous system of medicine in India, spices are used widely. But, till recently, there was a prejudice in many foreign countries that spices are injurious to health. Fortunately, this view has been contradicted recently by research workers in India and abroad.

Most of the spices are carminative, digestive, stimulant, stomachic, resolvent, antiperiodic, etc. Spices are now considered as the natural and necessary component of daily nutrition.

Imagine your food without any spices. Unimaginable, is it? We can easily put it this way; wherever you find an Indian you will find spices. No wonder, when food giants from across the world come to India, they have to add an Indian twist to their menu.

Right from the kitchen and medicinal uses in homes spices have an important role to play in different places. As India is blessed with a varied climate each of its states produces some spice or the other. No wonder why spices are used so extensively for cooking in India. Not only in India but also in some other countries spices are considered to be of great use.

Apart from adding colour, flavour and taste, consumption of spices provide infinite health benefits. You can be more creative in use of spices if you know its uses better. Some may be a substitute for your costly beauty products and even medicines. Have a quick overview of Indian spices, their uses and benefits
