JUST PREPARED NEW PROJ

FLOOR SPRING [CODE NO.1867]

Floor spring units are fitted to aid door closing, on heavier, more industrial and commercial use doors. They are used in place of the more standard face fixed door closer and are most suitable for conditions with heavier duty requirements. They are set into the floor underneath the door and are covered by a metal cover plate, made in either stainless steel or brass finish. . Floor spring units are easy to access for repairs but also give a very clean and concealed look. . Floor Springs can be fitted to glass doors with specific door parts.

DI CALCIUM PHOSPHATE (ANIMAL FEED GRADE) FROM HYDROCHLORIC ACID ROUTE [CODE NO.1868]

Rock phosphate is the source from which dicalcium phosphate can be manufactured. It finds applicability as a fertilizer and animal feed. The phosphours pentoxide content ranges around 41-42% in the dihydrate form. The trade mark for a dentrifice grade dicalcium phosphate dihydrate is captioned as "Dicalcium phosphate victor". It is CaHPO4.2H2O plus additive. FCC grade, Which is used as polishing agent in dentrifices. In the shallow, medium and deep black soils having the carbonate content from 3 to 6%, the available phosphorous was highest at 60 days when superphosphate was applied, whereas in the alluvial soil containing 1% carbonate, the highest available phosphorous was observed at 60 days when the fertilizer applied was dicalcium phosphate. Dicalcium phosphate proved as effective as superphosphate on alluvial, coastal alluvial, red and laterite soils, but was inferior on mediumblack and deltaic saline soils

***** POULTRY FARMING [CODE NO.1869]

The production of poultry in the United States and generally throughout the world is carried out by a highly specialized, efficient poultry industry that has been a leader in trends of scale and industrialization that have taken place in American agriculture over the past has a bright prospects over other foods half century. The total number of chicken because India has diverse geographical and produced in the United State annually amounts climatic conditions and produces a wide range

two separate purpose the production of table eggs. The organization and methods used by the two aspects of the poultry industry are different, and generally commercial table egg production and broiler production are carried out by separate enterprises. Availability of feeds and their ingredients contributed significantly to increased Poultry production is our country during the two decades. Feed represents about 75% of the total cost of egg production and per cent of the cost of broiler production. Therefore, efficiency in feeding is are of the key factors for successful poultry production. But very few poultry formers demote a comparable preparation of their managerial time to ensure that the feed supplies and food in take by the birds are satisfactory. The broiler industry is a highly integrated industry in which most of the steps in the production process are controlled by a single firm. A hatchery, breeder flocks, feed milk, processing plant, and a number of contract growers served by technical service staff make up a typical integrated broiler company. More than 90% of the commercial broilers are raised by grovers under contact to a broiler firm.

SINGLE SIDE AND DOUBLE SIDE PRINTED CIRCUIT **BOARDS (PCB)** MANUFACTURING UNIT [CODE NO.1872]

A printed circuit board, or PCB, is a selfcontained module of interconnected electronic components found in devices ranging from common beepers, or pagers, and radios to sophisticated radar and computer systems. The circuits are formed by a thin layer of conducting material deposited, or "printed," on the surface of an insulating board known as the substrate. Individual electronic components are placed on the surface of the substrate and soldered to the interconnecting circuits Contact fingers along one or more edges of the substrate act as connectors to other PCBs or to external electrical devices such as on-off switches. A printed circuit board may have circuits that perform a single function, such as a signal amplifier, or multiple functions. There are three major types of printed circuit board construction: single-sided, double-sided, and multi-layered. Single-sided boards have the components on one side of the substrate When the number of components becomes too much for a single-sided board, a double-sided board may be used. Electrical connections between the circuits on each side are made by drilling holes through the substrate in appropriate locations and plating the inside of the holes with a conducting material. The third type, a multi-layered board, has a substrate made up of layers of printed circuits separated by layers of insulation.

FOOD PRODUCTS COMPLEX (ONION SLICE, ONION POWDER. ONION FLAKES. **GARLIC POWDER, GARLIC** FLAKES, GARLIC PASTE, POTATO POWDER, POTATO FLAKES/SLICE) [CODE 1876]

Potato flakes are some of the most important form of dehydrated potato products that can be used in different ways including substitutior for fresh mashed potatoes. Unlike French fries and crisps whose consumption patterns and diversity is well established, little or no information can be obtained on flakes in Kenya This study was, therefore designed to assess the diversity and characteristics of potato flakes in Nairobi and Nakuru, Kenya. Potato flakes diversity and characteristics were determined through a structured questionnaire administered to attendants in 148 retail outlets (supermarkets and shops) followed by sampling and laboratory analysis of the available brands. Of all supermarkets surveyed, only 3.4% stocked potato flakes. There were only 2 brands of flakes, one imported and another, local brand. The sales were reportedly low due to the high cost (55%) of the products, lack of public awareness of the product (35%) and inadequate supply (15%). The oil and moisture contents of potato flakes from supermarkets in Nairobi and Nakuru significantly (P<0.05) differed between the brands being generally lower in the imported brand compared to local brand, ranging from 0.13% to 0.32%. There were no significant (P>0.05) differences in levels of sodium chloride with the maximum recorded being 2.11% in imported flakes. The moisture content ranged from 8.52% to 10.51% in local and 2 imported flakes brands, respectively. The sale of potato flakes can, however, be increased if the processors produced smaller unit weight packages that are more affordable and create awareness to the general public consumer.

SUPERABSORBENT POLYMER (POLY ACRYLIC ACID BASED) [EIRI-1745]

Superabsorbent polymers are primarily used as an absorbent for water and aqueous solutions for diapers, adult incontinence products, feminine hygiene products, and similar applications. Undoubtedly, in these applications, superabsorbent materials wil replace traditional absorbent materials such as cloth, cotton, paper wadding, and cellulose fiber Commercial production of superabsorben polymers began in Japan in 1978, for use ir feminine napkins. This early superabsorbent was a crosslinked starch-g-polyacrylate. Polyacrylic acids eventually replaced earlier superabsorbents, and is the primary polymer employed for superabsorbent polymers to Day.1 In 1980, European countries further developed the superabsorbent polymer for use in baby diapers. This first diapers employing this technology used only a small amount of polymer, approximately 1-2 g. In 1983, a thinner diaper using 4-5 grams of polymer and less fluff was marketed in Japan. The use of superabsorbent polymers revolutionized the diaper industry. Diaper manufacturers began to design diapers to take advantage of the amazing liquid retention ability of the polymer

STAINLESS STEEL UTENSILS [EIRI-1746]

Stainless steel cookware and bake ware is exceptionally durable. Once stainless steel has been stamped, spun or formed into utensi shape, it takes an extremely hard blow to dent it. Its attractive finish won't corrode or tarnish permanently, and its hard, tough, nonporous surface is resistant to wear. Extremely smooth and scratch resistant, stainless steel utensils take an excellent polish. Top-of-the-range cookware, bakeware, pantryware, tools and other equipment are frequently produced in stainless steel, which eases the work of homemakers. Like other steels, stainless steel is an alloy a combination of iron and other metals. What makes it different from other steels, however, is that it contains at least 11 percent chromium. It is chromium that makes steel "stainless" all the way through. Stainless steel may also contain other elements, such as nickel, molybdenum, columbium or titanium. Cost Estimation

DOUGH MOULDING COMPOUND (DMC) BULK MOUDING COMPOUND (BMC) SHEET MOULDING COMPOUND 2. (SMC) [EIRI-1747]

Bulk moulding compounds represent a family of chopped fibre thermoset or thermoplastic based composite materials. Fibre lengths are typically 1/2 inch, 1 inch or 2 inch (6 to 50 mm) Longer fibres provide higher tensile strengths while shorter fibres allow more complex shapes to be moulded. Standard modulus and intermediate modulus fibres are utilized as is S2 glass. Ten Cate offers a complete line of epoxy based thermosets and also offers a line of thermoplastic resins such as PEEK. PEKK PPS and PEI. Thermoplastic based resins offer low moisture uptake, good impact resistance and low flame, smoke and toxicity. Thermose resins are precision coated and designed to be low flow for optimal high fibre/resin content. Premix is generally known as Dough Moulding Compound (DMC), flow mix or Bulk Moulding Compound (BMC). Premix has been defined as "A fiber reinforced thermo set molding compound not requiring advancement of cure, drying of volatiles, or other processing after mixing to make it ready for use at the molding press". To this might be added "and which car

be molded without reaction by products under 320 MT./Day only sufficient pressure to flow and compact Rs. 19.80 Cr the material". If the word "mixing" in the above Rs. 16 Cr is changed to "manufacture" the definition can Rs. 484.50 Cr apply equally to sheet molding compound. Sulfur trioxide (alternative spelling, sulphur trioxide) is the chemical compound with the formula SO3. In the gaseous form, this species is a significant pollutant, being the primary agent in acid rain. It is prepared on massive scales as a precursor to sulfuric acid. Gaseous SO3 is a trigonal planar molecule of D3h symmetry, as predicted by VSEPR theory. SO3 belongs to the D3h point group. In terms of electron-counting formalism, the sulfur atom has an oxidation state of +6 and a formal charge of +2 The Lewis structure consists of an S=O double bond and two S-O dative bonds without utilizing d-orbitals

PAN MASALA AND MOUTH FRESHNERS [EIRI- 1749]

Pan masala contains catechu, chuna flavouring agents and perfumery compounds etc. It refreshens the mouth and gives the

feeling of cold in throat when taken in small amount. Panmasala is chewed either with pan or directly without any other thing. Pan masala is a mixture of nuts, seeds, herbs and spices which is served after meals in India. Various versions are also served in the Middle East and parts of Southeast Asia, where they are treated as mouth fresheners. Some households and restaurants make their own mixtures with special house ingredients, and it is also possible to purchase packaged pan masala from spice stores and many markets in India. Outside of India, it is available at Indian specialty stores and through importers.

SANITARY NAPKINS (DISPOSABLE) [EIRI- 1754]

Sanitary napkin is a hygiene absorbent produc used by women during menstrual periods. It is a product of technical textile. A sanitary napkin sanitary towel, sanitary pad, menstrual pad maxi pad, or pad is an absorbent item worn by a woman while she is menstruating, recovering Rs. 49 Lacs from vaginal surgery, for lochia (post birth Rs. 36 Lacs bleeding), abortion, or any other situation wher Rs. 1.98 Cr.

it is necessary to absorb a flow of blood from a woman's vagina. The menstrual cycle stars for voung women between the ages 11-17 requently around 12-13 years. On average a woman experiences a period every 28th Day 12-13 times in a vear. A menstrual period normally lasts 3-7 Days. The loss of fluid in a period is on average half a cup or 65-80 ml The menstrual pattern is influenced by giving birth and contraceptive methods. Menstruation lasts until menopause at the age 45-55. The feminine hygiene products market has evolved over more than 100 years.

WALNUT PROCESSING PLANT [EIRI-1755]

A walnut is the nut of any tree of the genus Juglans (Family Juglandaceae), particularly the Persian or English walnut, Juglans regia. It is used for food after being processed while greer for pickled walnuts or after full ripening for its nutmeat. Nutmeat of the eastern black walnut from the Juglans nigra is less commercially available, as are butternut nutmeats from Juglans cinerea.

CASHEW NUT PROCESSING [EIRI-1649]

Cashew (Anacardium occidentale L.) a native of Eastern Brazil introduced to India just as other commercial crops like Rubber. Coffee. Tea etc. by the Portuguese nearly five centuries back. The first introduction of cashew in India was made in Goa from where it spread to other parts of the country. In the beginning it was mainly considered as a crop for afforestation and soil binding to check erosions. The nuts, apple and other by products of this crop are of commercial importance. Though its commercial exploitation began from the early 60's, marginal lands and denuded forests were the areas set apart for the plantation development.

BIO GAS PRODUCTION & BOTTLING PLANT [EIRI-1650]

Energy is becoming a scarce and costly input in the world. Oil which accounts for a sizeable portion of our energy consumption, has been making a very heavy tax on our foreign exchange resources. Other than coal, we must also find alternate resources of energy centered around solar, wind, tidal and bio-gas. An effective bio-gas programme leads to efficient use of cow dung for gas recovery and partial supplement to plant nutrient requirement. Bio-gas programme leads to improvement in rural living including rural sanitation. Conventional bio-gas digesters set up in India were predominantly of the Khadi Villace Industries Commission Model.

ISOBGOL PROCESSING UNIT [EIRI-1651]

Isobgol (psyllium) is a natural gift to India especially to the North Gujarat and the southern part of Rajasthan since in no other part of the world the climatic conditions are such that which are favourable for growing Isobgol crop. Isobgol is a Persian name which means horse's ear. (Isob means horse any gol means ear) The name completely suits the description of isobgol seed, as it is very much resembles horse's ear. The Isobgol seed has Two parts, the above thin white layer

10 MW GRID INTERACTIVE SOLAR POLYCRYSTALLINE PV <u>POWER PLANT [EIRI-1652]</u>

Grid interconnection of photovoltaic (PV) power generation system has the advantage of more effective utilization of generated power. However, the technical requirements from both the utility power system grid side and the PV system side need to be satisfied to ensure the safety of the PV installer and the reliability of the utility grid. Clarifying the technical requirements for grid interconnection and solving the problems are grid therefore very important issues for widespread application of PV systems. Grid interconnection of PV systems is accomplished through the inverter, which convert DC power generated from PV modules to AC power used for ordinary power supply for electrical equipments. GROUND CALCIUM CARBONATE MICRONIZATION PLANT [EIRI-1653]

Calcite is a carbonate of calcium (CaCO3) containing 56% CaO and 44% CO2. It is one of the important industrial minerals also known as 'Calc Spar'. Pure crystallised transparent variety of calcite is known as 'Iceland Spar' which is used as Nicol prism in optical instruments using polarised light. Calcite is the most abundant crystalline form of calcium carbonate (CaCO3) Calcite limestone refers to a high-calcium limestone. As for hardness of calcite is concerned, pure calcite has a hardness of 3 Mohs, whereas naturally occurring limestone's lie in the range of 2-4 Mohs. Regarding the formation and occurrence of limestone/calcite mineral, this is widely distributed throughout the world in deposits of varying sizes & degrees of purity. Cost Estimation (US DOLLAR)

SOYA MILK AND PANEER [EIRI-1654]

Soyabeans are very much popular as food crop in most of the countries all over the world where a large number of food products are prepared form soyabean seeds. As edible oil milk and milk products giving sources crop the soyabeans are getting wide acceptance. In India too since last few decades. Souvabean seeds have a high nutritional composition; and can be converted in to various states, tastes, colours, flavours and other quality substances. As far as the use of sovabean is concerned it has taken a place from soap industry to food industries like. The soya milk, in particular has been developed like a boon for human beings as large. The specialty lies in the fact that in the reasons when traditional cow milk buffalo milk is not available in sufficient quantity, this milk serves the purpose almost equitably to other anima milk type. Soybeans possess a very high nutritional value.

COCOA BUTTER AND COCOA **POWDER WITH CULTIVATION** [EIRI-1655]

Cocoa Powder (Cocoa) is the food prepared by pulverizing the material remaining after the part of fat (Cocoa Powder) is removed from chocolate liquor. The V.S.chocolate standards define three types of cocos based on their fat content. These are (a) Breakfast, or high fat cocoa containing not less than 22% fat. (b) Cocoa, or medium fat cocoa containing less than 22% but more than 10%. (c) Low fat cocoa, containing less than 10% fat. Cocoa powder production toDay is an important part of the cocoa and chocolate industry, because of increased consumption of chocolate flavoured products.

PLASTIC MOULDED CHAIRS (P.P.) [EIRI-1658]

Due to the very low consumption as compared to developed countries and even in India, a large gap is to be filled by introducing new and cost effective products. Customers with low purchasing power don't have any option other than plastic furniture. Middle and lower classes in Pakistan is major buyer and these classes are 65% of total population. Also there are very few players in this business. The business of Molded Furniture has marked its place in the country through growth during the last ten years. This growth has opened up new opportunities. The prime reason for this is awareness about the product. Along with that, companies are offering conditional warranty of plastic chairs minimizing risk of customer. Molded Furniture is basically produces in developed countries to be used as Lawn Furniture and outdoor restaurants. As trends are from developed countries, it was introduced in Pakistar

SORBITOL FROM CORN [EIRI-1660]

Sorbitol, a polyol (sugar alcohol), is a bulk sweetener found in numerous food products In addition to providing sweetness, it is an excellent humectant and texturizing agent. Sorbitol is about 60 percent as sweet as sucrose with one-third fewer calories. It has a smooth mouthfeel with a sweet, cool and pleasant taste. It is non-cariogenic and may be useful to people with diabetes. Sorbitol has been safely used in processed foods for almost half a century. It is also used in other products, such as pharmaceuticals and cosmetics. D-Soribitol, CH2OH (CHOH) 4CH2OH (D-glucitol, L-gulitol), is a hexahydric alcohol with a 6-carbon atom straight-chain that contains six hydroxyl gropups, and has a molecular weight of 182.17.

POLYTHENE ROLLED SHEET [EIRI-1661]

Over 60 million tons of poly(ethene), often known as polyethylene and polythene, is manufactured each year making it the world's most important plastic. Its uses include film, packaging and containers, from bottles to buckets. Polyethylene is a thermosetting white solid high temperature resistance excellent resistance to chemical and to creep, high impact and tensile strength. The density of polyethylene is effected by the shape and spacing of the molecular chain, low density material, have highly branched and widely spaced chain, whereas high density materials have comparatively straight and closely aligned chain. Polyer of the latter type are called linear

SUPERABSORBENT POLYME (POLY ACRYLIC ACID BASED [EIRI-1662]

Superabsorbent polymers are primarily used as an absorbent for water and aqueous solutions for diapers, adult incontinence products, feminine hygiene products, and similar applications. Undoubtedly, in these

Patrons, deposit amount in EIRI Account ICICI BANK LTD. CA-038705000994 (RTGS/NEFT/IFSC Code: ICIC0000387)

applications, superabsorbent materials will replace traditional absorbent materials such as cloth, cotton, paper wadding, and cellulose fiber. Commercial production of super absorbent polymers began in Japan in 1978, for use in feminine napkins. This early superabsorbent was a crosslinked starch-gpolyacrylate. Polyacrylic acids eventually replaced earlier superabsorbents, and is the primarypolymer employed for superabsorbent polymers. European countries further developed the superabsorbent polymer for use in baby diapers. This first diapers employing this technology used only a small amount of polymer, approximately 1-2 g. In 1983, a thinner diaper using 4-5 grams of polymer and less fluff was marketed in Japan. **Cost Estimation**

BISCUIT (ASSORTED) AUTOMATIC PLANT [EIRI-1663]

38%

36%

Around the world Biscuits is the principal food and provides more nutrients than any other single food source. The value of grain in the world used for human consumption is over 2, 3 times of the value of the world iron and steel production. Although only 14% of the grain in the world is handled through international channels, cereal grains make up more than half of all the goods in overseas trade. The same Biscuit is made up form the word 'BIS' Which means twice and 'Cut' means Balled suggesting that product should be twice balled. The Biscuit were originally developed to meet the requirement of longer life of the barley products and for this, purpose, the dough were made up and twice balled to make them moisture free to improve their keeping qualities. The Biscuit manufacturing was started a century ago mainly to meet the

requirement of European Travelers. **Cost Estimation**

[EIRI-1664]

Pearl is one of the highly elegant variety of gem among others. Though the availability of pearl (natural) is limited in market. This is so costly that only limited number of people can purchase the same. For general categories of people it is the synthetic pearl which is largely available and used by the people.

The plastic beads of suitable size is manufactured by plastic manufactures, which are either dip coated or spray coated by suitable coating material giving the same pearly effect on it. It gives same shining like natural pearl. It can be prepared in various shades depending on the addition of requisite dyes in the pearl coating compound.

SODIUM SULPHIDE [EIRI-1665]

Sodium sulphide, Na2s, is an organic chemical that has attained as very important position in the organic chemical industry. It is an important sulphide of sodium. It is widely used in leather industry for removing hairs from the hide. It finds extensive applications in textile and also synthetics of sulphur dves and reduction of amino compounds. It is also used in paper industry, lothogrraphy and engraving manufacture of sulphur black dves etc. There was no production of sodium sulphide in India before the war, all the requirements being met from imports. Arrangements for the import of sodium sulphide failed and considerably difficulty was experienced by the textile and terming industries in meeting the requirements of the defense serious for textiles and leather.

SORBITOL FROM CORN [EIRI-1666]

Sorbitol, a polvol (sugar alcohol), is a bulk sweetener found in numerous food products In addition to providing sweetness, it is an excellent humectant and texturizing agent Sorbitol is about 60 percent as sweet as sucrose with one-third fewer calories. It has a smooth mouthfeel with a sweet, cool and pleasant taste. It is non-cariogenic and may be useful to people with diabetes. Sorbitol has been safely used in processed foods for almost half a century. The product has got great deand in future.

Market Survey Cum Detailed Techno Economic Feasibility Reports

To get Loan/Finance from Banks/Finacial Institutes. To set up your own Industry/Unit

To have Detailed & Exhaustive Data on any Project.

 * EIRI Project Reports are prepared by highly qualified & experienced consultants & Market Research and Analysis supported by a panel of Experts and Computerised.
 * Data provided are reliable and uptodate collected from manufacturers/suppliers, plant

already commissioned in India. A complete List of Industrial Project Reports are given on www.eiribooksandprojectreports.com

EACH DETAILED PROJECT REPORT CONTAINS:

✓INTRODUCTION : Project Mix, Uses & Applications, Quality Control Measure & Their Introduction for Attaining Required Properties Economy & Productivity Competence.

◆MARKET SURVEY : Market Position, Installed Capacity Production, Anticipated Demand, Present Manufacturers, Statistics of Imports & Exports, Estimated Demand, Demand & Supply Gap (If available), LI/IL Issued Recently

◆PROCESS OF MANUFACTURE : Inventory Controls & Tests, Comparative Study of Process for Manufacturing the Product, Formulations, Process Flow Sheet Diagram, Process Detail in Stages from Raw Materials to Finished Products

◆ RAW MATERIALS : Raw Material Specifications, Market Codes & Raw Material Prices, Sources of Procurement of Raw Materials [Imported/Indigenous]

◆LAND & BUILDING : Total Land Area Requirement with Rates, Covered Area Break-up with Estimated Costs of Construction

For assessing Market Potential, Corporate Diversifications, Planning, Investment Decision Making and to start your own setup, Entrepreneurs and Industrialists are most welcome to contact EIRI.

EIRI Technocrats and Engineers have just prepared "MARKET SURVEY CUM DETAILED TECHNO ECONOMIC FEASIBILITY REPORTS" on following lucrative products which are most viable and profitable and having bright future scope
